

V/5^â Fundamentals of Application Development

This course is designed for web developers responsible for developing content management applications using V/5.

For those students who are familiar with our StoryServer 5.0 Basic Site Development course (BSD), this is the V/5 update that replaces the BSD course.

Students attending this course should have a basic understanding of web coding, Vignette, and have begun the business planning stage of their application design and development project.

Course Overview

This course teaches students to use V/5 Tools to develop advanced web applications. Students will create templates for delivering content and developing content applications for workflow. In the course of the class, students will develop a fully functional site designed and ready for personalization.

Course Length

FAD is 2 parts. Part 1 is a 4-hour web-based course entitled, Introduction to Vignette for Technical Users. Part 2 is an instructor-led four-day course, held from 9 am to 5 pm.

Prerequisite(s)

- Completion of the Introduction to Vignette for Technical User web based training.
- Students must have a working knowledge of HTML, SQL, and relational database concepts.
- Students should also have experience in a web scripting language or programming language.

Content Outline

PART 1

The web-based portion of FAD is divided into the following modules:

1. Introduction to IVT
2. Overview and Concepts
3. Architecture
4. What's New
5. Tools
6. Basic Samplets Package
7. Vignette Resources
8. IVT Completion Confirmation

Please note that you will need to email training@vignette.com with your confirmation number upon completion.

PART 2

The instructor-led portion of FAD is divided into the following modules:

Day 1 – Fundamentals of Application Development

- Introduction to FAD
- V/5 Development Center Tools Review
- Application Planning and Strategy

Day 2 – Fundamentals of Application Development

- Tool Command Language (Tcl)
- Content Display Applications
- Content Management Applications

Day 3 – Fundamentals of Application Development

- Workflow
- Using the CMS commands for Workflow

Day 4 – Fundamentals of Application Development

- Communication Server Overview
- Application Design Contest (Case Study)
